Office Action Summary

Application No.

09/472,068

Applicant(s)

HORI ET AL.

Examiner

Syed Zia

Art Unit

2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 January 2005.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

This is in response to amendment filed on January 14, 2005. Original application contained Claims 1-21. Applicant previously amended Claims 1, 3, and 17. Applicant previously added new Claims 22-25. Applicant currently amended Claims 1, 3, and 17. Applicant Amendment filed on January 14, 2005 have been entered and made of record. Therefore, pending Claims 1-25 are presented for further consideration and examination.

Response to Arguments

Applicant's arguments filed January 14, 2005 have been fully considered but they are not persuasive because of the following reasons:

Applicants argued that as recited in the currently amended Claims 1, and 19 the cited prior art (CPA) [Menard et al. U. S. Patent 6,061,056] do not teach, *“that a program database is formed by dividing multimedia information into plural partial information to be stored with the plural partial information formed of a frame or frames and respectively adding program feature data representing respective content of plural partial information to the plural partial information to be stored with the plural partial information”*. Applicant also argued that the cited prior art only teaches a database for storing data representing criteria and storing, when program data stream matches a stored data, a program segment and program data stream..

Art Unit: 2131

This is not found persuasive. The Cited prior art teaches and describes automatic broadcast monitoring system that compares monitored broadcast signals with stored data representing program content of interest to user, and records segment of program when stored data matches program data, i.e. searching and comparing program data with stored data base don user interest (profile).

The system for monitoring standard broadcast signals receives broadcast signals, and includes a user selection unit for inputting criteria identifying program content of interest to the user. A database stores data representing the program content criteria, and a recognition device generates a program data stream representing the program content from the broadcast signals.

A comparator compares the program data with the stored data, and an output device carries out predetermined action, e.g. recording a segment of the program, when the program data matches the stored data. The system can be configured to activate a window on a multimedia PC when pre-selected program material is present in the broadcast signals.

Thus, the system detects the content of broadcast signals of particular interest to individual viewers, e.g. monitoring world events for stock brokerage services, government organizations etc. and, the users can automatically be alerted as events occur. Therefore, the system enables automatic detection of content on TV broadcast using computers, synchronizing and capturing incoming closed captioned text together with video and audio, and indexing and retrieval of individual sections of video and audio, based on content of e.g. closed caption text.

Art Unit: 2131

Therefore, the system of the cited prior art teaches and describes a receiver device for automatically recording programs of user's interest using the information of an electronic program list send from broadcasting station.

Applicants still have failed to explicitly identify specific claim limitations, which would define a patentable distinction over prior arts.

Therefore, the examiner asserts that cited prior art does teach or suggest the subject matter recited in independent Claims 1, 3, 17, and dependent Claims 2, 4-16, and 18-25. Accordingly, rejections for Claims 1-25 are respectfully maintained.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 2131

2. Claims 1-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Menard et al. U. S. Patent (6,061,056).

3. Regarding claims 1, and 3 Menard teaches and describes a system and method for monitoring broadcast signals, comprising means for receiving the broadcast signals and generating program signal streams to make available programs carried by said broadcast signals; user-operable selection means for inputting criteria identifying program content of interest to a user; a database for storing data representing said criteria; recognition means for generating from said broadcast signals, for each program stream, a program data stream separate from said program streams, said program data stream being representative of program content and changing dynamically therewith; means for synchronizing said program data stream to said program signal streams; a comparator for comparing said program data stream with said stored data; means for storing, when said program data stream matches said stored data, a program segment and the program data stream associated therewith while maintaining synchronism between the program data stream and the program segment; and display means permitting the user to examine a portion of a stored program segment by selecting a portion of the dynamic program data stream corresponding thereto (Fig. 1, and 2). Comprising:

- forming a program database by dividing multimedia information into items of partial information formed of frame or frames and respectively adding program feature data representing respective contents of the partial information to the plural partial information to thereby respectively store the partial information with the added program feature data in the program database; searching for the partial information which accords with user profile data

Art Unit: 2131

from the program database based on matching between the user profile data and the program feature data; and reading out the searched partial information from the database and providing the searched partial information to a user, (col. 1 line 66 to col. 2 line 19, and col. 9 line 1 to line 20);

- a first database configured to store multimedia information; an analyze section configured to analyze said multimedia information stored in said first database in units of partial information of the multimedia information using at least one analysis method of moving image analysis, acoustic/speech analysis, and text analysis (col. 3 line 15 to line 49);

- a second database configured to divide the multimedia information into plural partial information formed on frame or frames based on a result of the analysis by the analyze section and to add program feature data representing respective contents of the plural partial information which is obtained from a result of analysis made by the analyze section in units of the partial information or program feature data representing respective contents of the plural partial information which is externally inputted in units of the partial information to the plural partial information to thereby store the partial information with the added program feature data; and a search engine configured to search for program feature data from said second database in accordance with user profile data to find program feature data which accords with the user profile, and read the partial information from said first database in accordance with the found searched program feature data (col. 3 line 27 to line 65, and col. 6 line 4 to line 14).

4. Regarding Claim 17 Menard teaches and describes an information reception apparatus connected to an information providing server having an analyze section configured to analyze

Art Unit: 2131

multimedia information using at least one analysis method of moving image analysis, acoustic/speech analysis, and text analysis, a database which divides multimedia information into partial information formed of a frame or frames based on a result of analysis by analyze section, each partial information including representative images of a respective multimedia information, adds either (1) program feature data representing respective contents of the plural partial information which is obtained from a result of analysis made by the analysis section in units of the plural information or (2) program feature data representing respective contents of the plural information which is externally input in units of the partial information to the plural partial information to thereby store the partial information with the added program feature data (Fig-1-2) the apparatus, comprising:

a search engine configured to search for predetermined program feature data which accords with user profile data from said second database, and add the partial information from said database in accordance with searched program feature data (col. 3 line 27 to line 65, col. 6 line 4 to line 14, and col. 1 line 66 to col. 2 line 19, and col. 9 line 1 to line 20);

5. Claims 5-8, 11, 14, 19, and 22-24 are rejected applied as above rejecting claims 1, 3 and 17. Furthermore, Menard teaches and describes a system and method for monitoring and selecting from a number of multimedia information, wherein:

- said user profile data includes information associated with the user's taste (col. 5 line 39 to line 40, and col. 5 line 64 to col. 6 line 3);

Art Unit: 2131

- a keyboard configured to input said program feature data to said second database (col. 7 line 65 to line 67);
- a third database configured to store said user profile data (col. 1 line 66 to line 5);
- a fourth database configured to store commercial message information and a fifth database configured to store commercial feature data, wherein said search engine searches for the commercial feature data from said fifth database in accordance with the user profile data, and searches for the commercial message information corresponding to a searched commercial feature data from said fourth database (col. 5 line 41 to col. 6 line 27);
- a history recording section configured to record a viewing history data of a user (col. 5 line 55 to line 63).
- a display section configured to display the partial information selected by said search engine (col. 7 line 39 to line 51);
- storing the user profile data, and updating the user profile data based on a result of a search by adding an item of information corresponding to the searched partial information to the user profile data (col. 5 line 23 to line 30, and col. 9 line 54 to col. 10 line 16).
- each plural partial information includes representative images of respective multimedia information (col.9 line 21 to line 29).

6. Claims 2, 4, 9-10, 12-13, and 15-16, 18, 20-21, and 25 are rejected applied as above rejecting claims 5, 8 11, 19, and 22-24. Furthermore, Menard teaches and describes a system, and method where users can automatically be alerted as events occur. Enables automatic detection of content on TV broadcast using computers, synchronizing and capturing incoming

Art Unit: 2131

closed captioned text together with video and audio, and indexing and retrieval of individual sections of video and audio, based on content, wherein:

- adding commercial feature data to commercial information to form a commercial database; and providing, to the user, commercial information which accords with the user profile data based on matching between the user profile data and the commercial feature data when providing said searched partial information to the user (col. 3 line 10 to line 15);

- a link section configured to obtain a representative image of said partial information, and construct a display image including said representative image and searched program feature data (col. 2 line 47 to line 65);

- the user profile data include information representing one of a producer, title, character, and genre of the multimedia information; and said search engine searches for program feature data from said second database, and data which matches a thesaurus of the program feature data (col. 6 line 28 to line 65);

- said viewing history data represents a user, start and end time of watch, and program feature data of information watched by the user (col. 5 line 51 to line 55);

- a third database configured to store said user profile data; and a rewrite section configured to rewrite the user profile data stored in said third database in accordance with said viewing history data (Fig.3, and col. 6 line 57 to line 65);

- a display section configured to display the partial information selected by said search engine and display the commercial message information selected by said search engine as a banner; and a display section configured to display the partial information selected by said search

Art Unit: 2131

engine and display the commercial message information selected by said search engine as a sub window (col. 4 line 63 to col. 5 line 22);

- said group of information items including data indicating personal profile of the user; and said group of information items including data indicating taste of the user (col. 5 line 23 to line 30);

- each plural partial information includes representative images of respective multimedia information (col.9 line 21 to line 29).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
